(Original Signature of Member)

110TH CONGRESS  
2D SESSION

# H. R.

---

To encourage stronger building energy efficiency codes, promote renewable energy technology deployment, and protect the United States from the effects of climate change, and for other purposes.

---

## IN THE HOUSE OF REPRESENTATIVES

Mr. INSLEE introduced the following bill; which was referred to the Committee on \_\_\_\_\_

---

# A BILL

To encourage stronger building energy efficiency codes, promote renewable energy technology deployment, and protect the United States from the effects of climate change, and for other purposes.

1 *Be it enacted by the Senate and House of Representa-*  
2 *tives of the United States of America in Congress assembled,*

3 **SECTION 1. SHORT TITLE; TABLE OF CONTENTS.**

4 (a) SHORT TITLE.—This Act may be cited as the  
5 “\_\_\_\_\_ Act”.

6 (b) TABLE OF CONTENTS.—The table of contents for  
7 this Act is as follows:

1 buildings and ASHRAE Standard 90.1 2007 for  
2 commercial buildings, of at least—

3 “(A) 30 percent in editions of each model  
4 code or standard released in or after 2010;

5 “(B) 50 percent in editions of each model  
6 code or standard released in or after 2020; and

7 “(C) targets for intermediate and subse-  
8 quent years to be set by the Secretary at least  
9 3 years in advance of each target year, coordi-  
10 nated with the IECC and ASHRAE Standard  
11 90.1 cycles, at the maximum level of energy ef-  
12 ficiency that is technologically feasible and life-  
13 cycle cost effective.

14 “(2)(A) Whenever the provisions of the IECC  
15 or ASHRAE Standard 90.1 regarding building en-  
16 ergy use are revised, the Secretary shall, not later  
17 than 12 months after the date of such revision, de-  
18 termine—

19 “(i) whether such revision will improve en-  
20 ergy efficiency in buildings; and

21 “(ii) whether such revision will meet the  
22 targets under paragraph (1).

23 “(B) If the Secretary makes a determination  
24 under subparagraph (A)(ii) that a code or standard  
25 does not meet the targets under paragraph (1), or

1 if a national model code or standard is not updated  
2 for more than three years, then the Secretary shall  
3 within 12 months establish a modified code or stand-  
4 ard that meets such targets. Any such modified code  
5 or standard—

6 “(i) shall achieve the maximum level of en-  
7 ergy savings that are technically feasible and  
8 economically justified, incorporating available  
9 appliances, technologies, and construction prac-  
10 tices;

11 “(ii) shall be achieved through amend-  
12 ments or additions to the latest revision of the  
13 IECC or ASHRAE Standard 90.1 but may con-  
14 sider other model codes or standards; and

15 “(iii) shall serve as the baseline for the  
16 next determination under subparagraph (A)(i).

17 “(C) The Secretary shall provide the oppor-  
18 tunity for public comment on targets, determina-  
19 tions, and modified codes and standards under this  
20 subsection, and shall publish notice of targets, deter-  
21 minations, and modified codes and standards under  
22 this subsection in the Federal Register.

23 “(b) STATE CERTIFICATION OF BUILDING ENERGY  
24 CODE UPDATES.—

1           “(1) Not later than 2 years after the date of  
2           enactment of the \_\_\_\_\_ Act,  
3           each State shall certify to the Secretary that it has  
4           reviewed and updated the provisions of its residen-  
5           tial and commercial building codes regarding energy  
6           efficiency. Such certification shall include a dem-  
7           onstration that such State’s code provisions meet or  
8           exceed the 2006 IECC for residential buildings and  
9           the ASHRAE Standard 90.1-2007 for commercial  
10          buildings, or achieve equivalent or greater energy  
11          savings.

12           “(2)(A) If the Secretary makes an affirmative  
13          determination under subsection (a)(2)(A)(i) or es-  
14          tablishes a modified code or standard under sub-  
15          section (a)(2)(B), each State shall within 2 years  
16          certify that it has reviewed and updated the provi-  
17          sions of its building code regarding energy efficiency.  
18          Such certification shall include a demonstration that  
19          such State’s code provisions meet or exceed the re-  
20          vised code or standard, or achieve equivalent or  
21          greater energy savings.

22           “(B) If the Secretary fails to make a deter-  
23          mination under subsection (a)(2)(A)(i) by the date  
24          specified in subsection (a)(2), or makes a negative  
25          determination, each State shall within 2 years after

1 the specified date or the date of the determination,  
2 certify that it has reviewed the revised code or  
3 standard, and updated the provisions of its building  
4 code regarding energy efficiency to meet or exceed  
5 any provisions found to improve energy efficiency in  
6 buildings, or to achieve equivalent or greater energy  
7 savings in other ways.

8 “(c) STATE CERTIFICATION OF COMPLIANCE WITH  
9 BUILDING CODES.—(1) Each State shall, not later than  
10 3 years after a certification under subsection (b), certify  
11 that it has achieved compliance with the certified building  
12 energy code. Such certification shall include documenta-  
13 tion of the rate of compliance based on independent in-  
14 spections of a random sample of the new and renovated  
15 buildings covered by the code in the preceding year.

16 “(2) A State shall be considered to achieve compli-  
17 ance under paragraph (1) if—

18 “(A) at least 90 percent of new and renovated  
19 buildings covered by the code in the preceding year  
20 substantially meet all the requirements of the code;  
21 or

22 “(B) the estimated excess energy use of new  
23 and renovated buildings that did not meet the code  
24 in the preceding year, compared to a baseline of  
25 comparable buildings that meet the code, is not more

1 than 10 percent of the estimated energy use of all  
2 new and renovated buildings covered by the code in  
3 the preceding year.

4 “(d) FAILURE TO MEET DEADLINES.—

5 “(1) A State that has not made a certification  
6 required under subsection (b) or (c) by the applica-  
7 ble deadline shall submit to the Secretary a report  
8 on—

9 “(A) the status of the State with respect  
10 to meeting the requirements and submitting the  
11 certification; and

12 “(B) a plan for meeting and requirements  
13 and submitting the certification.

14 “(2) The Secretary shall permit extensions of  
15 the deadlines for the certification requirements  
16 under subsections (b) and (c) of this section for up  
17 to 1 year if a State demonstrates in the report  
18 under paragraph (1) that it has made a good faith  
19 effort to comply with such requirements and that it  
20 has made significant progress in doing so, including  
21 by developing and implementing a plan under para-  
22 graph (1)(B).

23 “(3) Any State for which the Secretary has not  
24 accepted a certification by a deadline under sub-  
25 section (b) or (c) of this section, with any extension

1 granted under paragraph (2), is out of compliance  
2 with this section.

3 “(4) In any State that is out of compliance with  
4 this section, a local government may be in compli-  
5 ance with this section by meeting the certification  
6 requirements under subsections (b) and (c) of this  
7 section.

8 “(5) The Secretary shall annually submit to  
9 Congress, and publish in the Federal Register, a re-  
10 port on the status of national model building energy  
11 codes and standards, the status of code adoption  
12 and compliance in the States, and implementation of  
13 this section. The report shall include estimates of  
14 impacts of past action under this section and poten-  
15 tial impacts of further action on lifetime energy use  
16 by buildings and resulting energy costs to individuals  
17 and businesses.

18 “(e) TECHNICAL ASSISTANCE.—

19 “(1) The Secretary shall on a timely basis pro-  
20 vide technical assistance to model code-setting and  
21 standard development organizations. This assistance  
22 shall include technical assistance as requested by the  
23 organizations in evaluating code or standards pro-  
24 posals or revisions, building energy analysis and de-  
25 sign tools, building demonstrations, and design as-

1       sistance and training. The Secretary shall submit  
2       code and standard amendment proposals, with sup-  
3       porting evidence, sufficient to enable the national  
4       model building energy codes and standards to meet  
5       the targets in subsection (a)(1).

6               “(2) The Secretary shall provide technical as-  
7       sistance to States to implement the requirements of  
8       this section, including procedures for States to dem-  
9       onstrate that their code provisions achieve equivalent  
10      or greater energy savings than the national model  
11      codes and standards, and to improve and implement  
12      State residential and commercial building energy ef-  
13      ficiency codes or to otherwise promote the design  
14      and construction of energy efficient buildings.

15      “(f) AVAILABILITY OF INCENTIVE FUNDING.—

16              “(1) The Secretary shall provide incentive fund-  
17      ing to States to implement the requirements of this  
18      section, and to improve and implement State resi-  
19      dential and commercial building energy efficiency  
20      codes, including increasing and verifying compliance  
21      with such codes. In determining whether, and in  
22      what amount, to provide incentive funding under  
23      this subsection, the Secretary shall consider the ac-  
24      tions proposed by the State to implement the re-  
25      quirements of this section, to improve and imple-

1       ment residential and commercial building energy ef-  
2       ficiency codes, and to promote building energy effi-  
3       ciency through the use of such codes.

4           “(2) Additional funding shall be provided under  
5       this subsection for implementation of a plan to  
6       achieve and document at least a 90 percent rate of  
7       compliance with residential and commercial building  
8       energy efficiency codes, based on energy perform-  
9       ance—

10           “(A) to a State that has adopted and is  
11       implementing, on a Statewide basis—

12           “(i) a residential building energy effi-  
13       ciency code that meets or exceeds the re-  
14       quirements of the 2006 IECC, or any suc-  
15       ceeding version of that code that has re-  
16       ceived an affirmative determination from  
17       the Secretary under subsection  
18       (a)(2)(A)(i); and

19           “(ii) a commercial building energy ef-  
20       ficiency code that meets or exceeds the re-  
21       quirements of the ASHRAE Standard  
22       90.1-2007, or any succeeding version of  
23       that standard that has received an affirma-  
24       tive determination from the Secretary  
25       under subsection (a)(2)(A)(i); or

1           “(B) in a State in which there is no State-  
2           wide energy code either for residential buildings  
3           or for commercial buildings, or where State  
4           codes fail to comply with subparagraph (A), to  
5           a local government that has adopted and is im-  
6           plementing residential and commercial building  
7           energy efficiency codes, as described in subpara-  
8           graph (A).

9           “(3) Of the amounts made available under this  
10          subsection, the Secretary may use amounts required,  
11          not exceeding \$500,000 for each State, to train  
12          State and local officials to implement codes de-  
13          scribed in paragraph (2).

14          “(4)(A) There are authorized to be appro-  
15          priated to carry out this subsection—

16                 “(i) \$35,000,000 for each of fiscal years  
17                 2009 through 2013; and

18                 “(ii) such sums as are necessary for fiscal  
19                 year 2013 and each fiscal year thereafter.

20          “(B) Funding provided to States under para-  
21          graph (2) for each fiscal year shall not exceed one-  
22          half of the excess of funding under this subsection  
23          over \$5,000,000 for the fiscal year.”.

1 (b) DEFINITION.—Section 303 of the Energy Con-  
2 servation and Production Act (42 U.S.C. 6832) is amend-  
3 ed by adding at the end the following new paragraph:

4 “(17) The term ‘IECC’ means the International  
5 Energy Conservation Code.”.

## 6 **TITLE II—TRANSMISSION**

### 7 **SEC. 201. FINDINGS.**

8 The Congress finds that—

9 (1) electricity produced from renewable re-  
10 sources helps to reduce greenhouse gas emissions,  
11 and limits emissions of other pollutants regulated  
12 pursuant to the Clean Air Act, enhances national en-  
13 ergy security, and provides substantial economic  
14 benefits;

15 (2) the potential exists for a far greater per-  
16 centage of electric production in the United States  
17 to be generated through the use of renewable re-  
18 sources than current levels;

19 (3) many of the best potential renewable energy  
20 resources are located in rural areas far from popu-  
21 lation centers;

22 (4) the lack of adequate electric transmission  
23 capacity is one of the primary obstacles to the devel-  
24 opment of electric generation facilities fueled by re-  
25 newable energy resources;

1           (5) the economies of many rural areas would  
2           substantially benefit from the increased development  
3           of electric generation facilities fueled by renewable  
4           energy resources; and

5           (6) it is in the national interest for the Federal  
6           Government to implement policies that will enhance  
7           the amount of electric transmission capacity avail-  
8           able to take full advantage of renewable energy re-  
9           sources to generate electricity.

10 **SEC. 202. NATIONAL RENEWABLE ENERGY ZONES.**

11           Title II of the Federal Power Act (16 U.S.C. 824  
12 et seq.) is amended as follows:

13           (1) By inserting before the section heading of  
14           section 201 (16 U.S.C. 824 et seq.) the following:

15 **“Subtitle A—Regulation of Electric**  
16 **Utility Companies”.**

17           (2) By adding at the end the following:

18 **“Subtitle B—National Renewable**  
19 **Energy Zones**

20 **“SEC. 231. DEFINITIONS.**

21           “In this subtitle:

22           “(1) The term ‘Commission’ means the Federal  
23           Energy Regulatory Commission.

24           “(2) The term ‘electricity from renewable en-  
25           ergy’ means electric energy generated from—

1           “(A) solar, wind, geothermal, or marine  
2           and hydrokinetic renewable energy;

3           “(B) biomass (as defined in section 203(b)  
4           of the Energy Policy Act of 2005);

5           “(C) landfill gas; or

6           “(D) qualified hydropower.

7           “(3) The term ‘marine and hydrokinetic renew-  
8           able energy’ means energy derived from—

9           “(A) waves, tides, and currents in oceans,  
10           estuaries, and tidal areas;

11           “(B) free flowing water in rivers, lakes,  
12           and streams;

13           “(C) free flowing water in an irrigation  
14           system, canal, or other man-made channel, in-  
15           cluding projects that utilize nonmechanical  
16           structures to accelerate the flow of water for  
17           electric power production purposes; or

18           “(D) differentials in ocean temperature  
19           (ocean thermal energy conversion).

20           “(4) The term ‘geothermal energy’ means en-  
21           ergy derived from a geothermal deposit (within the  
22           meaning of section 613(e)(2) of the Internal Rev-  
23           enue Code of 1986).

24           “(5) The term ‘qualified hydropower’ means—

1           “(A) incremental hydropower generation  
2           that is achieved from increased efficiency or ad-  
3           ditions of capacity made on or after the earlier  
4           of January 1, 2001, or the effective date of an  
5           existing applicable State renewable portfolio  
6           standard program at a hydroelectric facility  
7           that was placed in service before that date; or

8           “(B) additions of capacity made on or  
9           after the earlier of January 1, 2001, or the ef-  
10          fective date of an existing applicable State re-  
11          newable portfolio standard program at an exist-  
12          ing nonhydroelectric dam, provided that—

13               “(i) the hydroelectric project installed  
14               on the nonhydroelectric dam is licensed by  
15               the Federal Energy Regulatory Commis-  
16               sion and meets all other applicable environ-  
17               mental, licensing, and regulatory require-  
18               ments, including applicable fish passage re-  
19               quirements;

20               “(ii) the nonhydroelectric dam was  
21               placed in service before the date of the en-  
22               actment of this paragraph and operated  
23               for flood control, navigation, or water sup-  
24               ply purposes and did not produce hydro-

1 electric power on the date of the enactment  
2 of this paragraph; and

3 “(iii) the hydroelectric project is oper-  
4 ated so that the water surface elevation at  
5 any given location and time that would  
6 have occurred in the absence of the hydro-  
7 electric project is maintained, subject to  
8 any license requirements imposed under  
9 applicable law that change the water sur-  
10 face elevation for the purpose of improving  
11 the environmental quality of the affected  
12 waterway.

13 **“SEC. 232. DESIGNATION OF NATIONAL RENEWABLE EN-  
14 ERGY ZONES.**

15 “(a) REPORT.—Within 1 year after the date of enact-  
16 ment of this subtitle, the President shall report to Con-  
17 gress on the barriers to constructing new transmission  
18 lines that would increase renewable electric power genera-  
19 tion capacity in the United States.

20 “(b) DESIGNATION.—Within 18 months after the  
21 date of enactment of this subtitle, the President shall des-  
22 ignate as a National Renewable Energy Zone each area  
23 that meets each of the following conditions:

24 “(1) The potential to generate in excess of one  
25 gigawatt of electric power from renewable energy if

1       there were a sufficient level of electric transmission  
2       capacity without having a material detrimental im-  
3       pact on reliability.

4               “(2) An insufficient level of electric trans-  
5       mission capacity to enable one or more load centers  
6       to access the potential renewable electric power gen-  
7       eration capacity identified pursuant to paragraph  
8       (1).

9               “(3) Substantial demand in one or more load  
10      centers for renewable energy that would be gen-  
11      erated in the National Renewable Energy Zone if  
12      there were a sufficient level of transmission capacity.

13      “(c) FACTORS.—In making the designations required  
14      by subsection (b), the President shall take into account  
15      each of the following:

16              “(1) Federal and State requirements for utili-  
17      ties to incorporate renewable energy as part of the  
18      load of electric generating facilities.

19              “(2) Compatibility with State and regional  
20      transmission plans.

21      “(d) ADDITIONAL FACILITIES.—Within 3 years after  
22      the date of enactment of this subtitle, the President shall  
23      identify, and provide public notice of, specific new trans-  
24      mission facilities that, if constructed, could substantially  
25      increase the generation of electricity from renewable en-

1 ergy within the National Renewable Energy Zone. In iden-  
2 tifying such facilities, the President shall take into account  
3 the ability of the facility to provide transmission capacity  
4 from the National Renewable Energy Zone to multiple  
5 load centers.

6 “(e) EXCLUSIONS.—The President shall not include  
7 in any National Renewable Energy Zone designated under  
8 subsection (b), or identify facilities under subsection (d)  
9 on, any Federal land that is designated as a wilderness  
10 study area, Wilderness Area, unit of the National Park  
11 System, national monument, national wildlife refuge, unit  
12 of the National Landscape Conservation System, Inven-  
13 toried Roadless Area within the National Forest System,  
14 Wild and Scenic River, National Marine Sanctuary, or  
15 unit of the National System of Trails.

16 “(f) PUBLIC VIEWS AND CONSULTATION.—Before  
17 making any designation under subsection (b) or identi-  
18 fying facilities under subsection (d), the President shall  
19 consult with—

20 “(1) the Governors of affected States;

21 “(2) the public;

22 “(3) electric utilities and owners and operators  
23 of transmission facilities;

24 “(4) public utilities commissions and regional  
25 electricity planning organizations;

1           “(5) Federal and State land management and  
2 energy and environmental agencies;

3           “(6) renewable energy companies;

4           “(7) local government officials;

5           “(8) renewable energy and energy efficiency in-  
6 terest groups;

7           “(9) Indian tribes; and

8           “(10) environmental protection and land, water,  
9 and wildlife conservation groups.

10          “(g) EXPANSION.—The President shall, every 3 years  
11 after the date of enactment of this subtitle, consider  
12 whether to expand an existing National Renewable Energy  
13 Zone or designate a new National Renewable Energy Zone  
14 pursuant to the criteria set forth in subsection (b).

15          “(h) DELISTING.—The President, after opportunity  
16 for public comment, shall every 9 years review the Na-  
17 tional Renewable Energy Zones designated pursuant to  
18 subsection (b) and delist those Zones that no longer meet  
19 the criteria specified in that subsection.

20          “(i) AUTHORIZATION OF APPROPRIATIONS.—There  
21 are authorized to be appropriated for fiscal years 2009  
22 through 2012 such sums as may be necessary to carry  
23 out this section.”.

1                   **TITLE III—EXPEDITED**  
2                   **INTERCONNECTION STANDARDS**

3                   **SEC. 301. ADOPTION OF EXPEDITED INTERCONNECTION**  
4                   **STANDARDS FOR SMALL GENERATORS.**

5                   (a) INTERCONNECTION FOR UTILITIES NOT SUB-  
6                   JECT TO FEDERAL POWER ACT JURISDICTION.— Section  
7                   113(b) of the Public Utility Regulatory Policy Act of 1978  
8                   (16 U.S.C. 2623(b)) is amended by adding the following  
9                   at the end thereof:

10                   “(6) INTERCONNECTION STANDARDS.—

11                       “(A) IN GENERAL.—Each electric utility  
12                   shall provide interconnection service to devices  
13                   used for the production of electricity having a  
14                   capacity of no more than 20 megawatts. Such  
15                   interconnection shall be consistent with the  
16                   standards promulgated by the Federal Energy  
17                   Regulatory Commission through Order Number  
18                   2006.

19                       “(B) PURPOSES OF STANDARDS.—The  
20                   standard adopted under this paragraph shall be  
21                   designed to—

22                       “(i) encourage the use of distributed  
23                   renewable and combined heat and power  
24                   electricity generation; and

1                   “(ii) ensure the safety and reliability  
2                   of devices used for the production of elec-  
3                   tricity and the local distribution systems  
4                   interconnected with devices used for the  
5                   production of electricity.

6                   “(C) EXPEDITED PROCEDURES.—Each  
7                   standard under this section shall include sepa-  
8                   rate expedited procedures for interconnecting  
9                   devices used for the production of electricity  
10                  having a capacity of up to at least 10 kilowatts  
11                  and a separate standard that expedites inter-  
12                  connection for devices used for the production  
13                  of electricity having a capacity of no more than  
14                  2000 kilowatts. In designing such expedited  
15                  procedures, each State regulatory authority  
16                  (with respect to each electric utility for which it  
17                  has ratemaking authority) and each nonregu-  
18                  lated utility shall consider model interconnec-  
19                  tion rules published by the Interstate Renew-  
20                  able Energy Council.

21                  “(D) SAFETY, RELIABILITY, PERFORM-  
22                  ANCE, AND COST.—Each standard under this  
23                  section shall establish those measures for the  
24                  safety and reliability of the affected equipment  
25                  and transmission systems as may be appro-

1           priate. Such standards shall be consistent with  
2           the reliability standards under section 215 of  
3           the Federal Power Act and all applicable safety  
4           and performance standards established by the  
5           National Electrical Code, the Institute of Elec-  
6           trical and Electronics Engineers, Underwriters  
7           Laboratories, or the American National Stand-  
8           ards Institute, and the North American Electric  
9           Reliability Corporation, yet constitute the min-  
10          imum cost and technical burdens to the inter-  
11          connecting devices used for the production of  
12          electricity.

13                 “(E) ADDITIONAL CHARGES.—The stand-  
14          ards under this section shall prohibit the impo-  
15          sition of additional charges by the owners or  
16          operators of electric utilities for equipment or  
17          services for interconnection that are additional  
18          to those necessary to achieve the objectives of  
19          this paragraph.

20                 “(F) EXEMPTIONS.—Notwithstanding any  
21          other provision of this section, any State regu-  
22          latory authority or electric utility that adopted  
23          standards consistent with this paragraph before  
24          the enactment of this paragraph shall not be re-  
25          quired to take any additional action under this

1 paragraph. Such an exemption shall be effective  
2 upon the issuance by the State regulatory au-  
3 thority (or the electric utility, in the case of a  
4 nonregulated electric utility) within 120 days  
5 after the date of enactment of this paragraph  
6 of a public notice demonstrating that such  
7 interconnection standards have been adopted.”.

8 (b) CONFORMING AMENDMENT.— Section 113(a) of  
9 the Public Utility Regulatory Policy Act of 1978 (16  
10 U.S.C. 2623(a)) is amended by adding the following at  
11 the end thereof: “For the purpose of applying this sub-  
12 section to the standard under paragraph (6) of subsection  
13 (b), the date of the enactment of such paragraph (6) shall  
14 be substituted for the date of the enactment of this Act.”.

## 15 **TITLE IV—BIOENERGY**

### 16 **PARTNERSHIP**

#### 17 **SEC. 401. NATIONAL BIOENERGY PARTNERSHIP.**

18 (a) IN GENERAL.—The Secretary of Energy shall es-  
19 tablish a National Bioenergy Partnership to provide co-  
20 ordination among programs of State governments, the  
21 Federal Government, and the private sector that support  
22 the institutional and physical infrastructure necessary to  
23 promote the deployment of sustainable biomass fuels and  
24 bioenergy technologies for the United States.

1 (b) PROGRAM.—The National Bioenergy Partnership  
2 shall consist of five regions, to be administered by the  
3 CONEG Policy Research Center, the Council of Great  
4 Lakes Governors, the Southern States Energy Board, the  
5 Western Governors Association, and the Pacific Regional  
6 Biomass Energy Partnership led by the Washington State  
7 University Energy Program.

8 (c) AUTHORIZATION OF APPROPRIATIONS.—There  
9 are authorized to be appropriated for each of fiscal years  
10 2009 through 2013 to carry out this section—

11 (1) \$20,000,000, to be allocated among the 5  
12 regions described in subsection (b) on the basis of  
13 the number of States in each region, for distribution  
14 among the member States of that region based on  
15 procedures developed by the member States of the  
16 region; and

17 (2) \$5,000,000, to be allocated equally among  
18 the 5 regions described in subsection (b) for region-  
19 wide activities, including technical assistance and re-  
20 gional studies and coordination.

21 **TITLE V—REDUCTION OF BLACK**  
22 **CARBON EMISSIONS TO PRE-**  
23 **SERVE THE ARCTIC**

24 **SEC. 501. FINDINGS.**

25 The Congress finds the following:

1           (1) Black carbon is a largely unregulated green-  
2           house particulate pollutant that contributes signifi-  
3           cantly to overall greenhouse pollution by attracting  
4           the sun's heat and has a particularly detrimental ef-  
5           fect when it falls onto the Arctic and other ice be-  
6           cause it increases the absorption of solar radiation,  
7           reducing the albedo effect, and leads to faster ice  
8           heating and melting. The atmospheric residence of  
9           black carbon is less than 2 weeks, making this pol-  
10          lutant a candidate for immediate greenhouse-effect  
11          amelioration.

12          (2) Through various clean air programs, the  
13          United States has reduced much of its black carbon  
14          pollution, though some industries (e.g., commercial  
15          shipping and certain other diesel-engine powered  
16          machines) could improve and help spur technological  
17          innovation in other countries where major black car-  
18          bon pollution still occurs through industrial activi-  
19          ties, agriculture and forestry practices, and residen-  
20          tial cooking with dirty fuels.

21          (3) The Committee on Oversight and Govern-  
22          ment Reform of the House of Representatives re-  
23          ceived testimony establishing that black carbon is a  
24          serious threat to health and that reductions in black  
25          carbon will produce immediate health improvements.

1           (4) Black carbon is not explicitly regulated by  
2           the United Nations Framework Convention on Cli-  
3           mate Change, other international instruments, or by  
4           present United States Federal law.

5           (5) The United States foreign policies and as-  
6           sistance programs, as well as directions to multilat-  
7           eral lending organizations such as the World Bank,  
8           possess the potential to significantly reduce black  
9           carbon pollution globally.

10          (6) Taking immediate cost-effective and techno-  
11          logically feasible action to protect the Arctic, espe-  
12          cially by significantly reducing black carbon pollu-  
13          tion, will protect an ecosystem under imminent  
14          threat due to global warming and will establish a  
15          strong foundation for further United States leader-  
16          ship in combating global warming.

17 **SEC. 502. PURPOSES.**

18          The purposes of this title are—

19               (1) to immediately identify ways to reduce black  
20               carbon emissions and pollution, both in the United  
21               States and world-wide at low cost, to stem and re-  
22               verse the melting of Arctic Sea ice, as well as con-  
23               tribute to reduction of overall global warming; and

24               (2) to establish the United States as a leader  
25               in protecting the Arctic environment.

1 **SEC. 503. DEFINITIONS.**

2 As used in this title:

3 (1) The term “Administrator” means the head  
4 of the Environmental Protection Agency, or that  
5 person’s designee.

6 (2) The term “black carbon” means the soot-  
7 based absorbing component of carbonaceous  
8 aerosols, known to attract the sun’s rays and in-  
9 crease global warming, and includes black carbon  
10 and organic carbon complexes that induce net global  
11 warming.

12 (3) The term “person” means any individual,  
13 corporation, partnership, trust, association, or any  
14 other private entity, or any officer, employee, agent,  
15 department, or instrumentality of the Federal Gov-  
16 ernment or of any State, municipality, or political  
17 subdivision of a State, or of any foreign government,  
18 any State, municipality, or political subdivision of a  
19 State, or any other entity subject to the jurisdiction  
20 of the United States.

21 (4) The term “soot” means the carbonaceous  
22 aerosol product of incomplete combustion, including  
23 both black carbon and organic carbon.

24 (5) The term “technologically feasible” means  
25 practices and technology that have been experi-  
26 mentally demonstrated to reduce greenhouse gas

1 emissions. The term includes promising new tech-  
2 nology that has not yet been implemented by any  
3 person.

4 **SEC. 504. BLACK CARBON ABATEMENT STUDY.**

5 (a) STUDY.—The Administrator shall conduct a  
6 study of black carbon emissions in consultation with the  
7 National Oceanic and Atmospheric Administration, the  
8 National Aeronautics and Space Administration, the  
9 Agency for International Development, the Department of  
10 the Interior, and other agencies. The study shall include  
11 each of the following:

12 (1) An identification of—

13 (A) the latest scientific data relevant to the  
14 climate-related impacts of black carbon emis-  
15 sions from diesel engines and other sources;

16 (B) the major sources of black carbon  
17 emissions in the United States and worldwide,  
18 and an estimate of black carbon emissions from  
19 those sources;

20 (C) the diesel and other direct emission  
21 control technologies, operations, or strategies to  
22 remove or reduce emissions of black carbon, in-  
23 cluding estimates of the costs and effectiveness  
24 of the measures;

1 (D) the entire lifecycle and net climate im-  
2 pacts of installation of diesel particulate filters  
3 on existing heavy-duty diesel engines; and

4 (E) control technologies, operations, or  
5 strategies for black carbon emissions from resi-  
6 dential cookstoves, forest burning, and other  
7 agriculture-based burning, including estimates  
8 of the costs and effectiveness of the measures.

9 (2) Recommendations of the Administrator re-  
10 garding—

11 (A) areas of focus for additional research  
12 for technologies, operations, and strategies with  
13 the highest potential to reduce emissions of  
14 black carbon; and

15 (B) actions the Federal Government could  
16 carry out to encourage or require additional  
17 black carbon emission reductions.

18 (b) REPORT.—Not later than 180 days after the date  
19 of enactment of this Act, the Administrator shall submit  
20 to Congress a report describing the results of the study.

21 **SEC. 505. AUTHORIZATION OF APPROPRIATIONS.**

22 There are authorized to be appropriated \$3,000,000  
23 to carry out this title.
